FAMIX Deaerator – the water deaeration system for the highest demands

QUALITY MADE IN GERMANY
Special machines for your production

The FAMIX Deaerator sets new standards for optimum water quality and outstanding product stability:
With our **vacuum deaerator,** you can achieve a **residual oxygen content of just 0.5-1 mg/l** – ideal for producing high-quality still drinks such as fruit juices.

If even lower residual oxygen levels are required, **pressure deaeration** is a powerful addition. The combination of vacuum and pressure processes ensures a **minimum residual oxygen content of ≤ 0.05 mg/l**, which is essential for brewing water quality.

Your benefits:

- **Individual plant design**
  depending on application and desired residual oxygen content
- **State-of-the-art control technology**
  for highest accuracy with simple operation
- **Hygienic Design**
  guarantees easy, automated cleaning processes
- **Fully automatic control system as an optional extension**
  for production and cleaning (standard equipment for higher outputs)

We offer comprehensive services and know how:

Good reasons for FAMIX:

- Compact and low maintenance design
- Customized, individual special solutions
- Quality made in Germany
- High production and investment reliability
- Synergy effects through integration into the Pütz Group

Worldwide service:

- Consulting and sales
- Development and construction
- Assembly and commissioning
- On-site maintenance

Pütz Group – a strong association of specialists.
Our network of experts optimizes your production for maximum efficiency.
